AUTOMATING BUSINESS PROCESSES WITH EFT™ SMB

KEY RESULTS

Reduce file transfer setup time by up to 80 percent over manual transfer processes

Automate file transfers on a schedule, on monitored folder changes, or triggered by specific actions

Reduced errors, more control than SFTP servers, and a more efficient and secure data exchange process than FTP

ABOUT GLOBALSCAPE

Globalscape is a pioneer in securing and automating the movement and integration of data seamlessly in, around and outside your business, between applications, people and places, in and out of the cloud. Founded in 1996, Globalscape's data exchange and integration software and services are trusted by over 13,000 customers in over 150 countries worldwide, including global enterprises, governments, and small and medium enterprises. Headquartered in San Antonio, TX, Globalscape enables companies to increase business agility by unleashing the power of data. Whether you are a line-of-business stakeholder struggling to connect multiple cloud applications or an IT professional tasked with integrating partner data into homegrown or legacy systems, Globalscape provides cloud services that automate your work, secure your data and integrate your applications – while giving visibility to those who need it. Globalscape makes business flow brilliantly. Globalscape has consistently been named a top workplace by Computerworld, the San Antonio Business Journal, Texas Monthly, and the San Antonio Express-News, among others.

Delivering data using manual processes is vulnerable to workforce limitations, vacations, turnover, and simple human error. Automation allows you to deliver data without manual intervention, saving time and avoiding potential errors.

Enhanced File Transfer™ (EFT™) SMB enables you to streamline business processes without limitations imposed by legacy systems and applications. With an intuitive interface, administrators can easily create sophisticated, automated transfers.

EFT SMB can automate the delivery of data when it's needed, instead of when you have time to do it, increasing your day-to-day productivity and overall operational efficiency. The automation features in EFT SMB provide more control than SFTP servers, and a more efficient and secure data exchange process than FTP.

The built-in Event Rule system and Custom Command interface enables you to run executables, batch files, and scripts as specific events occur, send a notification email when a specific event occurs, and trigger events based on connection, file system, user, server, site, and Workspaces conditions.

LET EFT SMB AUTOMATE YOUR DATA PROCESSES

Additional, optional modules provide even more automation and security capabilities:

- The **Folder Monitor module** creates an Event Rule trigger used to detect the creation, deletion, and renaming of files in a monitored folder and to perform Actions based on these triggers. You can define an Event Rule so that when EFT SMB detects that a file has been added to the folder, an email is sent to notify one or more users that the file is available.

- The **Timer module** allows you to execute a specified Action (e.g., generate and send a report) only one time or repeatedly at specified intervals.

- The **File Transfer Client module** enables EFT SMB admins to define copy, move, and download actions in Event Rules.

- The **OpenPGP module** performs file encrypt/decrypt/sign/verify operations as files are uploaded or downloaded

- The **Auditing and Reporting module** enables automated report generation of EFT activities

- The **SFTP module** enables file transfers over SFTP

- The **HTTP/S module** enables files transfers over HTTP and HTTPS
